

Full Stack Intern Assessment Task

Task Title: “FileAnywhere” – A Basic File Sharing Web Application

You are required to build FileAnywhere — a file-sharing platform where users can upload files and get a shareable download link. The system should also support user authentication.

Requirements

1. User Features

- Sign up / Login / Logout (basic JWT or session-based auth)
- Upload files (limit: 10MB, PDF/images/docs only)
- Generate a unique downloadable link
- View list of uploaded files
- Delete uploaded files

2. Tech Stack

- **Frontend:** React.js + Tailwind CSS / Bootstrap
- **Backend:** Node.js with Express, Django, FastAPI, Flask
- **Database:** MongoDB / PostgreSQL / MySQL
- **Authentication:** JWT (preferred) or Django sessions
- **File Storage:** Local filesystem (e.g., /uploads) or use Cloudinary / Firebase for bonus

Deliverables

1. **GitHub Repo** with full source code (split into frontend/ and backend/)
2. **README** containing:
 - Project setup instructions
 - Tech stack

Rules & Notes

- You must **not copy-paste** projects from the internet. Plagiarism will lead to disqualification.
- File names should be sanitized and stored securely.

Submission Deadline: 14th June, 2025
